* **Sample Business Requirment Documents Template**

• Problem :- There are vegetable vendors face various challenges in terms of supply chain managment and marketing. For selling Negetables they needs to travel from one place to other. For making this work easier we need to make an web-based application. Through this web-based application they can connects with there ~~easie~~ customers.

1] **Executive Summary Snapshot :-**

— From research has shown that we need to develop an web application for vegetable vendors and custmers.

— Research data indicates that the supply chain managment system for vegetables vendors ~~have~~ has to improve.

— The scope of the proposed project is to design, develop and implement a supply chain managment system for vegetables vendors

— Implementation ~~improvem~~ improve in customer service.

— The main buisness drivers behind the effort are vegetable vendors.

— The purposed system will enable vendors to • minimized loss

2] Project Description :-

- The current process allow us to make an application for vendors, the proposed process allow us to help vegetable vendors manage their supply chain operations efficiently.
- The goal of this project is manage supplier information and performance. this improve customers satisfaction.

- why we need to take this project
   To make life of vendors as well as customers easy. By this vendors will get more profit as well as our company become famous. This project support im give us a platform to help ordinary people.

3] Project Scope.

- For giving our best web-application we need to reach out to far vendors. We need to talk with them. We need to create different ideas.

- A Task is that we will make have to make an easy to use by both vendors and customers for commul communicate with each other. The web-app In the web-app we need to creat. some featurs.

- The featurs are able to upload picture, location, namo etc. This aweb-app have diffend language. So they can eo also connects with any people in India.

- We need to discuss all this with team and team in company to then deliver the work.

- Costs of this project is approximately 40,000 for web-app including legal fees & taxes. We also need to pay our teammember. We need 6 months to complete the project.
